PRESENTATION

Graduated in Business Administration, I started my career working in the commercial area of a financial institution and then had the opportunity to act as a financial analyst, where I got involved with projects in the area of data analysis and machine learning. This experience gave me the opportunity to have contact with the Python language, which led me to review my professional area of expertise.

In mid-2016 I started my own roadmap to become a Full-Stack developer, participating, along these years in several projects using languages such as Dart, Java, Python, Javascript and Typescript. I currently work full time with a company in some projects that requires good knowledge in Django, NextJs - Typescript and React-Native.

My aim is to keep on progressing as a developer and always be up to date concerning good-practices on coding, best and most trending frameworks on the market and find solutions with tech to help every-day needs..
